11. High-lubricity
12. Advanced polymer formula
13. Effective on paints, gel, or clear coat finish
14. Can be applied to glass, chrome, polished metal, and plastic trim

APPLICATION PROCEDURE

WATERLESS WASH

ONYX
COATING
Every Day Like Brand New

APPLICATION

Using onyx coating Waterless Wash

1. Fold your towel so there are 8 usable sides.
2. Starting at the top of the vehicle (the cleanest part), spray a panel generously with your waterless wash.
3. The size of the panel depends on how large an area you can spray and wipe dry before it dries on its own.
4. Generally speaking, half the roof or half the hood is a good size section.
5. Wipe lightly in one direction. There's no need to apply significant pressure and doing so can result in micro scratches.
6. Note: Do not wipe in a circular motion!, you're wiping the dirt you've just removed back over the section you've just cleaned.
7. Pay attention to the cleanliness of the towel. When one side becomes soiled, switch to a new side of the towel.
8. You have 8 sides to work with and hopefully some extra towels, too.
9. Wipe the section completely dry and move on to the next section.
